(a) window exists (single-seed Watts)
single-seed cascade fraction
RGG mean degree z
cascade window
peak z=5.9
z_c^{RGG}
$2/\theta$
(b) swarm aggregates above the window
(criticality is local, not bulk)
operating mean degree z_{global}
connectivity ρ_r
paper
ρ_r=2.1
window $[z_c^{RGG}, 2/\theta]$
swarm operating z_{global}
(c) σ density-invariant & subcritical;
matching near-ideal (no tuning)
branching ratio σ
IFD matching slope
connectivity ρ_r
