reward-proportional?
Pearson r=-0.12 [-0.13, -0.11]
recruitment inflow J_i^+
(new commits / tick)
per-capita payoff $f_i = Q_i/(Nn_i)$
richness-proportional?
Pearson r=+0.15 [+0.13, +0.16]
patch richness Q_i (sources)
crowd / contagion?
Pearson r=+0.28 [+0.26, +0.30]
occupancy n_i (committed fraction)
