reward-proportional?
Pearson r=-0.11 [-0.11, -0.10]
recruitment inflow $J_i^+$
(new commits / tick)
per-capita payoff $f_i = Q_i/(Nn_i)$
richness-proportional?
Pearson r=-0.02 [-0.04, -0.01]
patch richness $Q_i$ (sources)
crowd / contagion?
Pearson r=+0.11 [+0.09, +0.13]
occupancy $n_i$ (committed fraction)
